Focus on API manufacturing to reduce the reliance on imports

- Constructing large dedicated zones for manufacturing APIs
- Providing extended and timely approvals for environmental and other regulatory clearances
- Setting up common utilities to make smaller units economically viable in these zones
- Facilitating collaborations with CSIR labs and universities to improve process technologies
- Adopting innovative models for land acquisition and commercialization to minimize upfront capex investments
- Setting up a task force with an aim to boost domestic API manufacturing

The government can look to import substitution and design policies that encourage API production in India.
