

Leveraging automation in Pharmaceutical operations for continuous improvement

GANADHISH KAMAT

Global head of Quality,

Dr. Reddy's Limited

Indian Challenges faced by Pharma industry Pharmaceutical Alliance

- Pricing pressure due to government initiatives & consolidation of buyers in US
- Large number of approvals on day 1
- High cost of development, high investments & long gestation period for complex generics
- Increased regulatory expectations & scrutiny
- Increasing operating cost (including manpower cost)

Indian How do we overcome the challenges Pharmaceutical Alliance

- Continuous improvement
 - First time right (Development / manufacturing)
 - Reducing failures / defect rates
 - Reducing COPQ / COPE
 - Cost competitiveness
 - Doing more with less resources
- One of the important enabler
 - Adoption of new age technologies

Indian Pharmaceutical Digital transformation around us Alliance

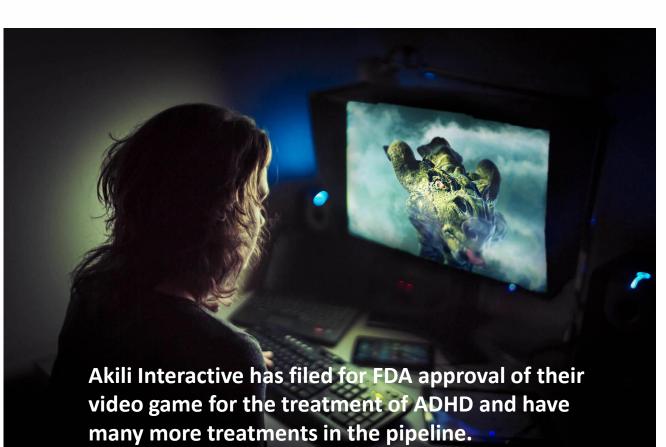

Success stories

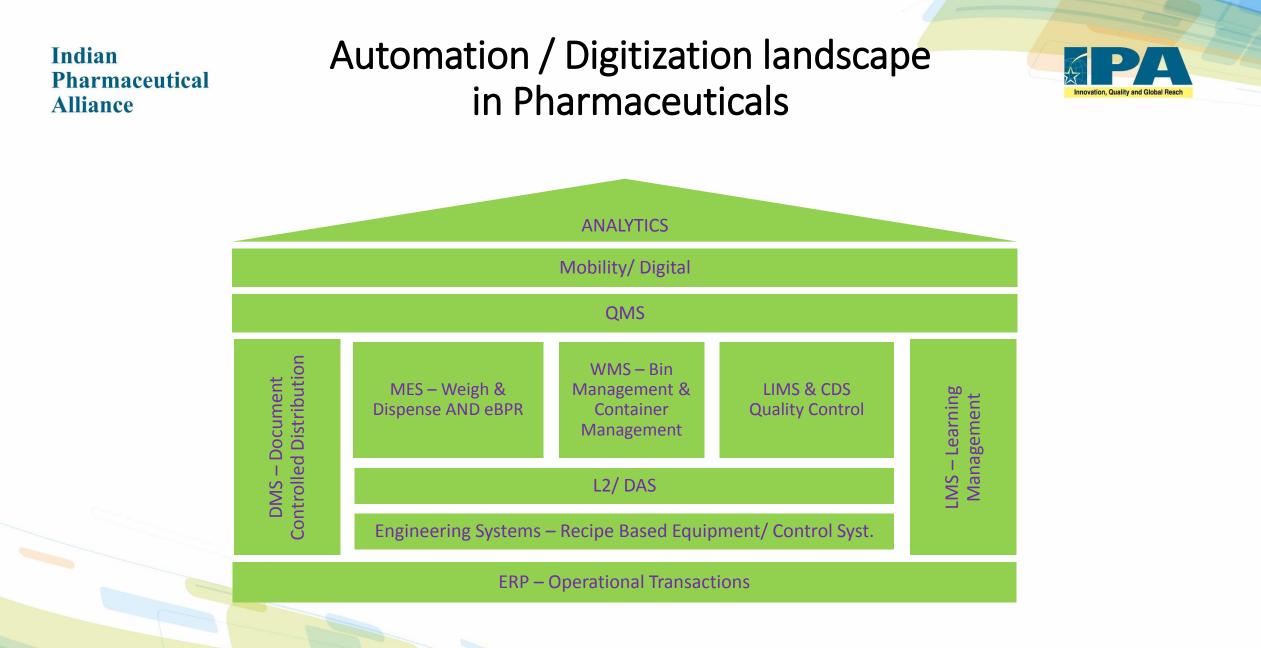

- Google
- Amazon
- Uber
- Oyo

Missed opportunities

- Kodak
- Swiss watches
- Blockbuster
- Xerox

Automation and digitization in Pharmaceutical operations

Mechanization

Benefits - Eliminate muscle work, Fully automated and integrated systems, Improved safety, efficiency and compliance

Indian **Process Automation & digitization Pharmaceutical** Alliance Warehouse Production Quality Inventory ERP (SAP) Planning Mgmt. Mgmt. Mgmt. 1 Master **Recipe based** Batch Parameter report **Specification** eBPR from MES Mfg. operations from L2 HISTORIAN Records Execution Electronic System Weighing & Equipment **Execution** Batch Dispensing Mgmt. Recording 2 Compliance Batch Record Exceptions Mgmt. Review eBPR from MES Parameter report from Equipment L2 - HISTORIAN Data Collects Process Data from Individual **Process Parameter** Equipment through out the process cycle Acquisition Reports. L2 CPP **Shop Floor** Process parameter Reports

Benefits : Reduction of manual activities, paper, errors. Easy data retrieval, online trending and status reports. Traceability. Improved compliance

Digitization of Maintenance

Preventive Maintenance App

Mobile Label - Printing

Calibration Maintenance App QR Code Enablement Breakdown & Facility Maintenance

- Overall Efficiency No paper based work
- Almost real-time updating leads to increased compliance
- Authenticity better equipment handover through mobile signoff
- Ease of order management
- Online recordmanagement for
- decisions

 Mobile label printing directly from the app makes the activity robust and clean

• Eliminate duplication, inefficiencies and errors that come with paper management.

 QR code enablement on equipment will allow for evidence of an engineer actually performing the maintenance activity.

IT Enabled Functionalities in Utilities: SCADA & DAS

UMS – Utilities Management

PMS – Power Management

Water System Management

BMS & EMS Systems

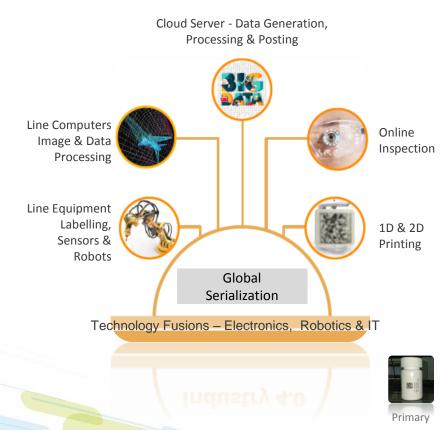

Central Dashboard

Benefits

Digitization of Log Books Improved Data Integrity & compliance Effective tracking on Utilities Consumption Uninterrupted Power cycles, Electrical Loads - Control & Distribution Enhanced Visibility on energy consumption

Product Traceability through Serialization

Functionalities

- · Serialization Data Generation & online Printing
- Online inspection OCR & OCV
- 360 Inspection, Bulk Scanning
- 1D & 2D codes Handling
- Aggregation Data marriage bottle to shipper to pallet
- Parent Child Relationship
- Data commissioning & Batch Reporting
- Finished Goods online Report
- Data Posting Cloud Data

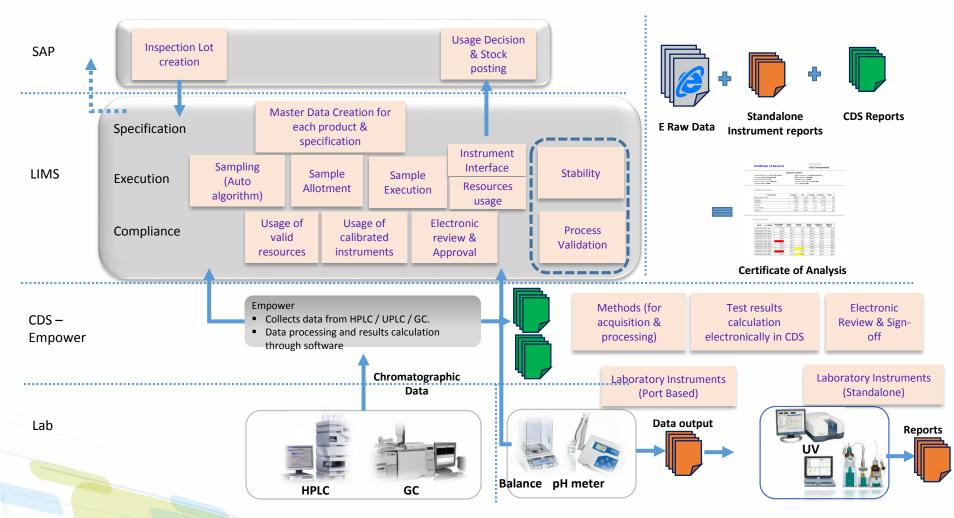

Tertiary-Pallet Level

Benefits : Supply chain traceability, elimination of counterfeiting

Laboratory Operations and Quality management

LIMS, CDS & Others

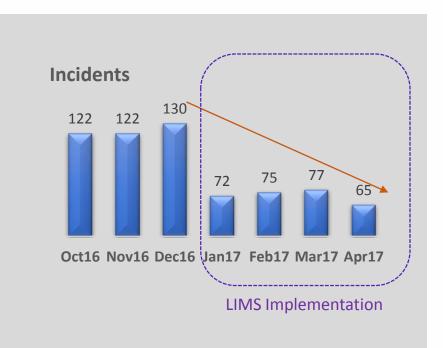

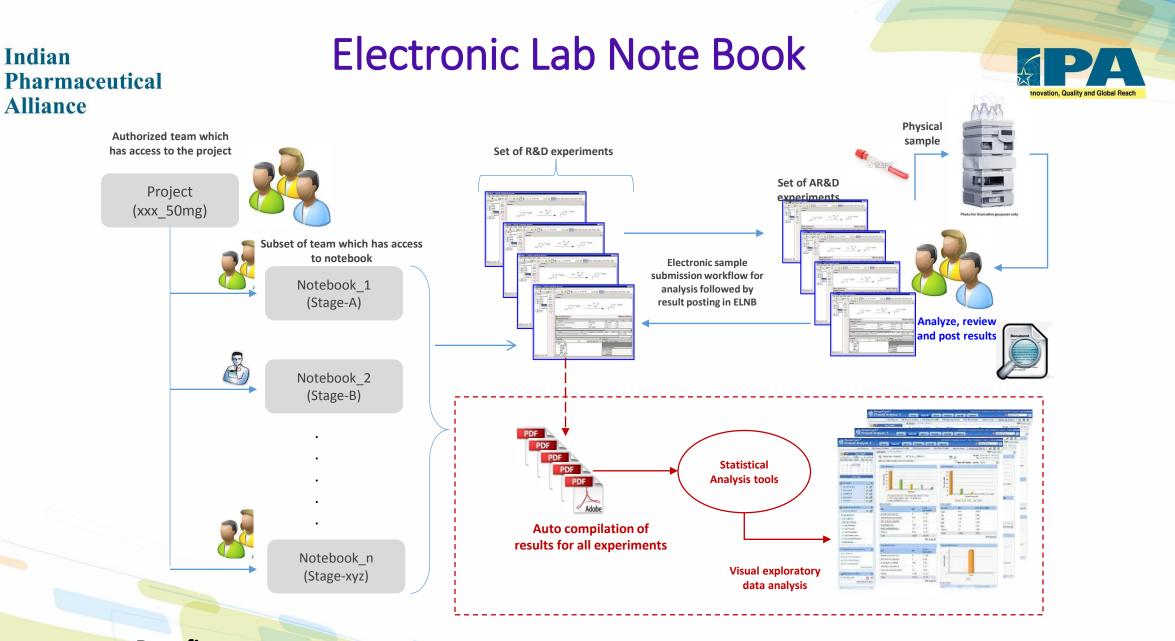

Benefits realization LIMS (Reduction of incidents)

LIMS Eliminated

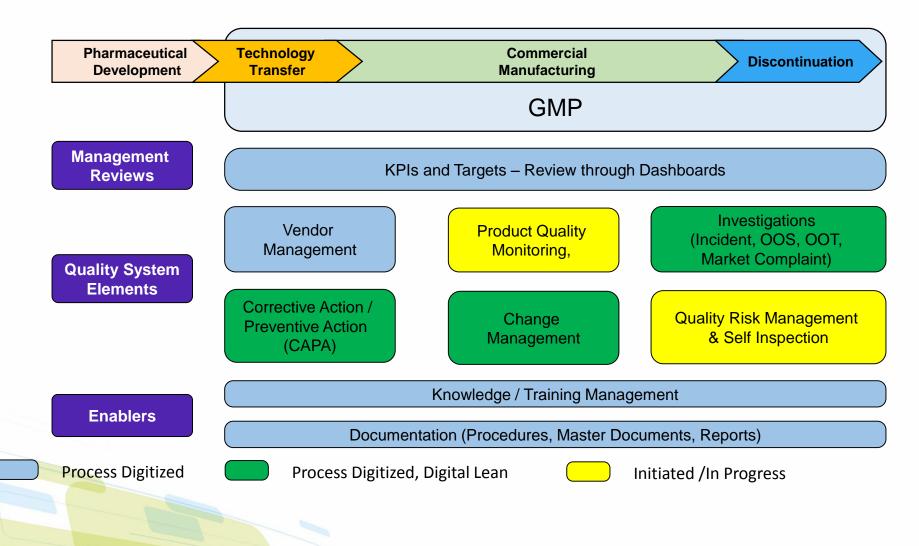

- Calculation errors
- Use of non-calibrated instrument
- Stock entry missing
- User not qualified
- Transcription errors

Benefits: Automated calculations, Enhanced data security, Storage space reduction, Interface with other systems, Ease of data retrieval, Improved compliance

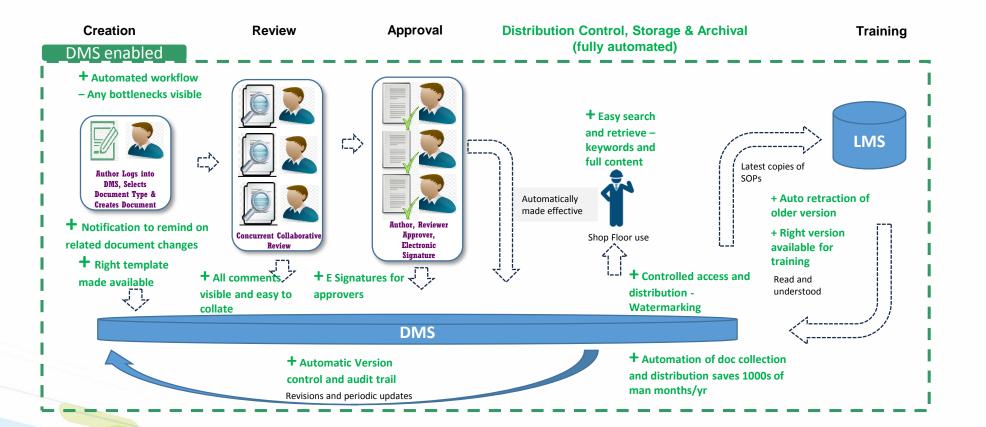

Quality Management System

Document Management System

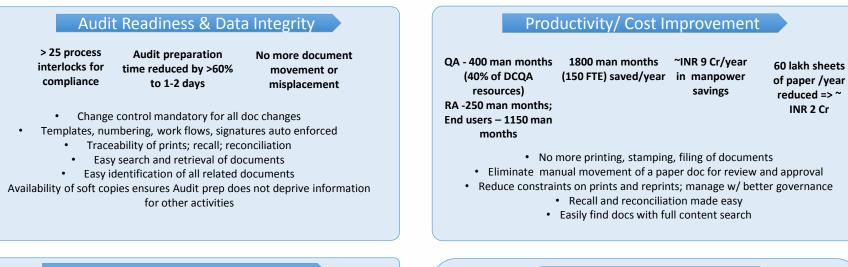

٠

User Experience

Over 2.5 lakh Single dashboard for Emails eliminated all pending document tasks

for Compliance built in. ent Fewer decisions to make

Harmonised processes across all units. Easy to follow and assure

Visibility for decision support

Bottlenecks in workflows visible and actionable

ess of documents – simplification made possible

Interconnectedn

Insights into cycle time and quality of work

Analytics for simplification and continuous improvement

How to put the data to use

- KPI Dashboards
 - Turn Around Time Analysis
 - Pending Samples Analysis
 - OOS Analysis
 - Incident Analysis
 - Change Control Analysis
 - Product scorecard & CQA analytics
 - Stability alerts
- Support in investigation (Root cause predictor)
- PAT
- Process improvements
- Continuous Process Verification
- APQRs

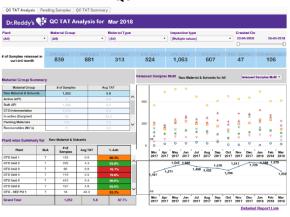

Analytics Dashboards

OOS & Incidents

QC TAT

Pending sample analysis

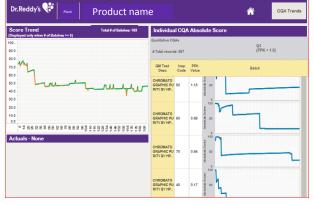

Change control analysis

Stability Alerts

Product score card

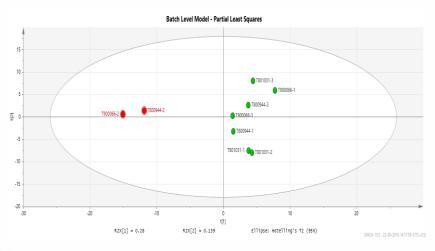

Support in investigations

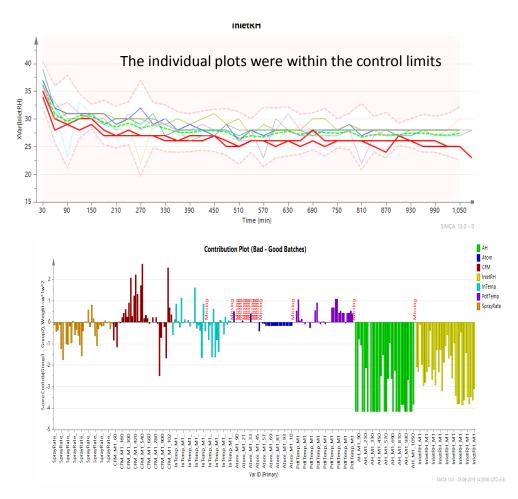

Problem statement

Low dissolution in one batch of ER product.

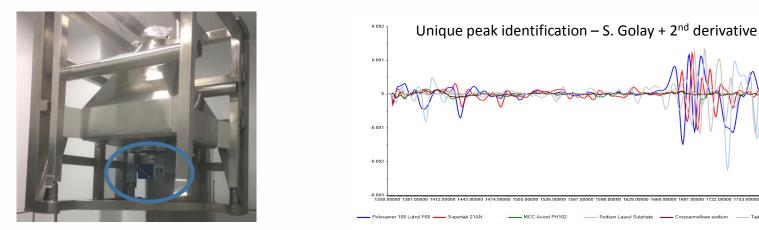

Multivariate analysis (using partial least square regression) showed two lots were different compared to good lots

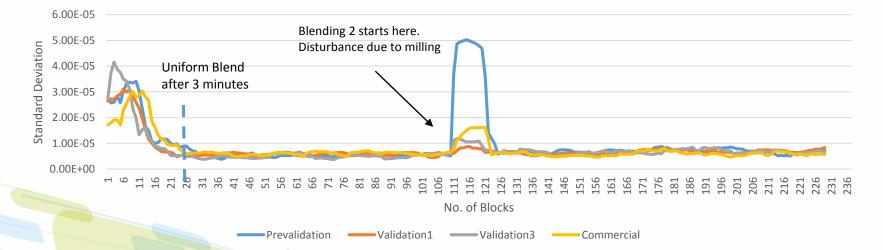

The contribution plot of the difference between bad and good lots in terms of standard deviation indicated bad lots were run at low AH and RH in comparison to good lots

PAT for process improvement & parametric release

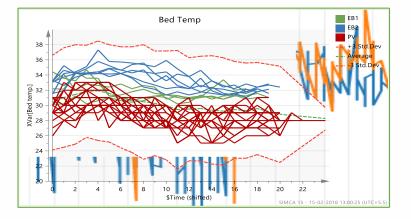

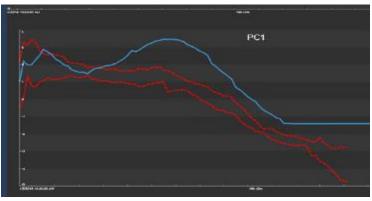

Outcome : Reduction of process time & Deletion of blend analysis

Golden Tunnel based process monitoring **Pharmaceutical**

Contribution Chart for Tablet weight & RS PV - EB batches Compressed Tablets (0.210 g) MDC Ethanol Film coating (0.269 g) LOE (AN Var ID (Primary SIMCA 15 - 19-02-2018 16:53:22 (UTC+5.5

Building PLS Model

Indian

Alliance

- Identify Batches with desired COA
- Build "Golden tunnel" of process parameters based on these "good" batches data.
- Build Machine learning models to arrive at principal components that explain the behavior of process

Online Monitoring

- Create Score Plot 1 Principal component that combines effects & interactions on all Process Parameters.
- Alerts when current production parameters deviate from "golden batch" conditions.

Contribution Plots

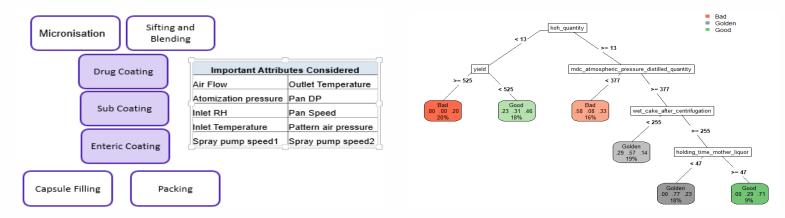

- Highlight contribution of individual process parameters
- Identify corrective actions in real time.

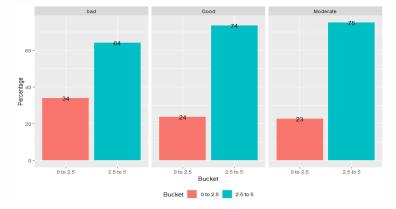

Yield Optimization

Indian Pharmaceutical Alliance

Use of Machine Learning based approach

Understand Process Flow

- Understand Process Flow and identify Process parameters to be analysed
- Random Forest and Lasso Regression etc. models are used to identify the important parameters.

Decision Trees

• Create Decision Trees to identify the set of "golden batch" parameters needed for target yield.

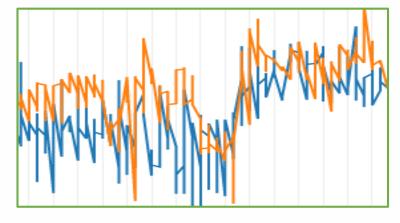

Deploy Model

 Deploy model in commercial manufacturing and categorize effects based on obtained actual yield.

Prescriptive model to Optimize machine setup **Pharmaceutical**

Faster Setup & Reduced Scrap to improve Op. Efficiency

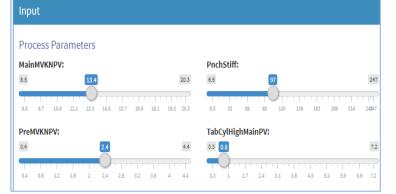

Identify Correlations

Indian

Alliance

Through data models, study the data and detect Inputs that have a strong correlation with outputs.

Run Simulations

- Operator to run simulations by keying in Batch to be compressed.
- System retrieves necessary specifications, compares with operator selected Inputs.

Output									
Model Prediction is									
[1] "Class:good Hardness:11.95 Thickness:									
Good if									
 Hardness is between 9.5 to 14 									
 Thickness is between 3.45 to 3.55 									
 Group weight is between 3.6 to 3.78 									

Throw Predictions

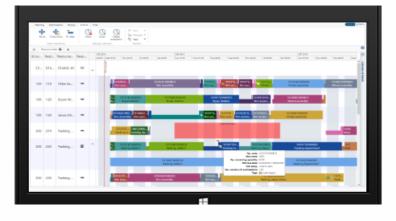

Help the operator with prediction of CQA values that the machine will produce if the selected batch is run with simulated CPPs.

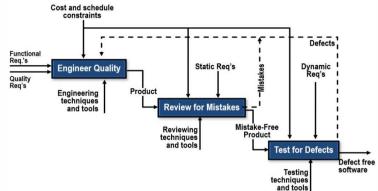

Integrated Planner & Scheduler

Indian Pharmaceutical Alliance

Focus on Core Operating Process

Integrated Planning

- Digital Value Stream Map
- Flow Optimization(Ageing)
- Capacity Planning Optimizer, Planner for Equipment & Manpower including QC Lab Scheduling.

Proactive Decision Making

- Scheduling model automatically generates optimized schedule
- Web app for manual adjustments and building scenarios

Digital Performance Management

- Leverage big data to create real time transparency of performance.
- Live tracking of test completion on performance board

Challenges of Automation

- Cost
 - License cost, Hardware, Implementation, Computer system validation, AMC,
 - Escalations
 - Upgrades
- Data migration
- Increased Regulatory scrutiny
 - Design (security, integrity, access controls, privileges)
 - Computer system validation
 - Data storage (backups, retrieval, control, audit trails)
- Change management
- Training of people
 - Operators & Supervisors

Thank you
